Summary

“XENIA: HE Inclusiveness Index” is a European project whose main aim is to develop a tool (namely, XENIA Index) that will assist European universities in evaluating the equality and inclusiveness strategies that they adopt to address diversity (specifically based on sex, gender and sexual orientation) within their contexts.

This document is a report of the main activities that have been performed for developing the XENIA Inclusiveness Index – Beta version (Work Packages 2 – WP2 - of the XENIA project).

The Index has been defined based on the results that emerged from the preliminary research phase conducted in Work Package 1 (WP1), that led to the identification of the specific thematic areas and indicators to effectively measure the inclusiveness of Higher Education (HE) settings.

The XENIA Inclusiveness Index consists of three key elements:

1. Matrix, consisting of a series of objective indicators that assess the inclusiveness of a HEI;
2. Survey for students and staff of HEIs to gauge the subjective perceptions of inclusiveness in the HEI;
3. XENIA Index, that is a vector index that allows to summarise the information collected and record and interpret changes in specific values of the assessment process.

In the next sections, the following are presented; the framework and the key concepts on which the XENIA Index is based (Section 1 - Overview), how the XENIA Index is structured (Section 2 – The XENIA materials) and how it can be used (Section 3 – The XENIA process). The confirmed list of the Matrix indicators and the survey’s questions have been reported at the end of the document (Section 4 – Instruments).

www.xeniaindex.eu

Section 1 - Overview

XENIA Inclusiveness Index: framework & key concepts

Nowadays, there are no specific tools nor mechanisms to address social and educational inclusion of all gender identities and sexual orientations in European Higher Education Institutions (HEIs). As also outlined by the League of European Research Universities (LERU) in a position paper published in 2019, many efforts have been made to address institutional issues of diversity and inclusion, but they were not sufficiently synergistic in tackling the everyday barriers faced by all under-represented groups of the academic community, including those based on sex, gender and sexual identity. Furthermore, the focus of many of these efforts has been either on staff issues or on student issues rather than on addressing the needs of the academic community as a whole. Based on these considerations, the LERU Thematic Group Equality, Diversity & Inclusion argued that *“universities willing to undertake a rigorous analysis of themselves as an academic body, to honestly identify the gaps, to promote empathic listening to marginalised groups, and to implement interconnected, university-wide systemic changes, will be much better placed to achieve sustainable equality, diversity and inclusion. As a result, they will create a better, more caring academic community for all, not only for underrepresented groups. They will become even more valuable to the world”*.

XENIA Inclusiveness Index perfectly fits in this perspective, acting as an innovative and timely instrument to specifically assist HEIs in i) measuring and valuing the relevance and effectiveness of their equality and inclusion strategies in relation to sex-, gender- and sexual orientation-based differences, ii) identifying the gaps in their inclusiveness policies/programmes/initiatives, and iii) bridging those gaps with a series of tools that provide examples and actionable measures to improve equality, diversity and inclusion in HEIs.

Equality, support for diversity, and inclusion are the key concepts of XENIA.

Equality

Equality refers to the fair and unbiased treatment of individuals, or groups of individuals, that, practically speaking, means ensuring equal opportunities regardless of one's background. The equality concept acknowledges that people are different from each other and focus the attention on the fact there are specific barriers that need to be overcome to ensure people achieve the same levels

www.xeniaindex.eu

of education, civil and cultural participation, independent of their starting point or personal characteristics.

When it comes to gender and sexuality issues, actions to promote equality within HE contexts primarily aim to contrast prejudice and discrimination. They could be structured against three primary levels:

- Institutional level, through the enactment of anti-discrimination measures and regulations;
- Cultural level, intervening to reduce the spread of cultural and stereotypical representations related to sex, gender and sexual orientation;
- Interpersonal level, providing awareness-raising and information on gender and sexual identity issues, aimed at increasing personal involvement and awareness that everyone has a role in promoting collective well-being, which passes through the knowledge and deconstruction of stereotypes.

Support for Diversity

Supporting diversity means recognising, respecting and celebrating each other's differences, which allows for an empowered culture of creativity and innovation.

Inclusion

Inclusion represents the highest level of an Institution's commitment to foster social inclusion. Promoting inclusion in HE contexts means providing social norms and practices that include differences related to gender and sexual identity and make it possible for everyone to feel welcome and valued.

An inclusive environment valorises diverse backgrounds through specific actions that give visibility to individuals' differences and celebrate their positive value.

The dimensionality of the XENIA Inclusiveness Index

Based on the results of an extensive literature review carried out during WP1 of the XENIA project (see [D2.1](#) for further details), XENIA Inclusiveness Index has been structured around five core dimensions, each one assessing specific aspects related to equality, diversity and inclusion (EDI) within HEIs: Institution, Policy & Programmes, Pedagogy & Academic Programming, Support Services, and Academic Life.

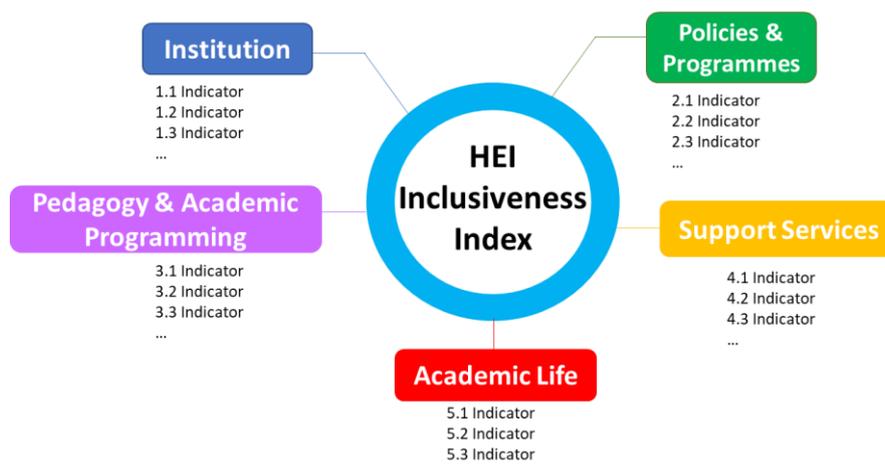

Figure 1 The dimensionality of XENIA Inclusiveness Index.

In addition, a series of sub-categories have been identified for each thematic area. The final structure is as follows:

A. Institution

Institution is related to the organisation of the Higher Education Institution, its institutional frameworks and mechanisms for addressing discrimination based on sex, gender and sexual orientation, and its commitment to equality, diversity and inclusion for all students and staff.

Sub-categories:

Committees refers to groups made up of staff and/or students that have organised meetings and are dedicated to particular subjects, such as equality, diversity and inclusion.

Facilities refers to toilets, bathrooms, changing rooms.

Identification refers to mechanisms and methods for disclosing one's' gender identity on university

www.xeniaindex.eu

records.

Recognition refers to aspects of equality, diversity and inclusion that the HEI has been recognised for.

Satisfaction refers to specific opportunities that students and staff are provided with for the assessment of the Institution in relation to equality, diversity and inclusion.

B. Policy & Programmes

Policies & Programmes captures various policies implemented by the HEI that advocate for equality, diversity and inclusion and programmes offered to staff and the student body to educate, promote diversity, equality, inclusion and to build allies.

Sub-categories:

Policy refers to the HEI's building blocks to implement their institutional framework.

Training & Workshops refers to opportunities for education and development.

C. Pedagogy & Academic Programming

Pedagogy and Academic Programming investigates the level of “inclusiveness”, diversity and friendliness of courses, curricula, structure of the teaching and other academic programmes.

Sub-categories:

Evaluations refer to opportunities for feedback and development of the HEI, courses and/or teaching.

Academic Programming refers to courses and library EDI.

D. Support Services

Support services measures the presence, depth and relevance of the services that are available to staff and students to promote their inclusion and well-being. In this category, students' services such as health, housing, libraries, etc. are looked into.

Sub-categories:

Health refers to medical and psychological services for students and staff.

Housing refers to student accommodation on or off campus.

www.xeniaindex.eu

Finance refers to economic access for students.

Study Abroad refers to the process of exchanging or enrolling in classes in another HEI in a different country for a specified period of time.

E. Academic Life

Academic Life encompasses all aspects of educational experience, from academic studies to social life through the lens of gender and sexual orientation inclusion and diversity. This is investigated through aspects of university life such as extracurricular activities, events, campaigns, online spaces etc.

Sub-categories:

Extracurricular Activities refers to activities and social aspects of HE life that are optional registrations and participation.

Awareness Raising & Events refers to opportunities for EDI to be promoted, celebrated, and campaigned.

www.xeniaindex.eu

Section 2 - The XENIA materials

The XENIA Inclusiveness Index has been designed to capture both the objective and subjective dimensions of EDI in HEIs. Such a design allows HEIs to get a picture of their inclusiveness levels based on i) what they actually do to promote EDI (objective dimension), ii) how their strategies for EDI (in terms of policies, practices, facilities, initiatives, etc.) are perceived by the academic community (subjective dimension).

Three key components, each one structured around the five identified thematic areas (Institution, Policies & Programmes, Pedagogy & Academic Programming, Support Services, Academic Life), have been developed for such purposes:

- a Matrix, designed explicitly for HEIs' employees committed to EDI, formally or informally (hereinafter "specialised personnel"), that includes a series of objective indicators assessing the presence/absence of specific actions that promote EDI (objective dimension),
- a survey for students, faculty and administrative/technical staff (tailored by academic profile), that evaluates the degree to which they perceive their institutional settings as actually inclusive or equipped to be inclusive (subjective dimension),
- the XENIA Index, that is a vector index that allows to summarise the information collected and to record and interpret changes in specific values of the assessment process.

www.xeniaindex.eu

The XENIA Matrix

The XENIA Matrix has been developed using the 64 macro-indicators (+ sub-indicators) identified under WP1. Three primary operations have been performed during WP2:

- rewording of some indicators and slight modifications concerning merge or split of several indicators to further enhance the overall consistency throughout the Matrix;
- assignment, for each indicator, of specific values in order to establish hierarchies of relevance, importance and significance, for equality, diversity and inclusion, among the indicators;
- assignment, for each indicator, of specific values assessing the potential ease of access of information for HEIs.

The final structure of the Matrix

The confirmed pilot version of the Matrix consists of 65 macro-indicators plus 136 sub-indicators (Figure 2).

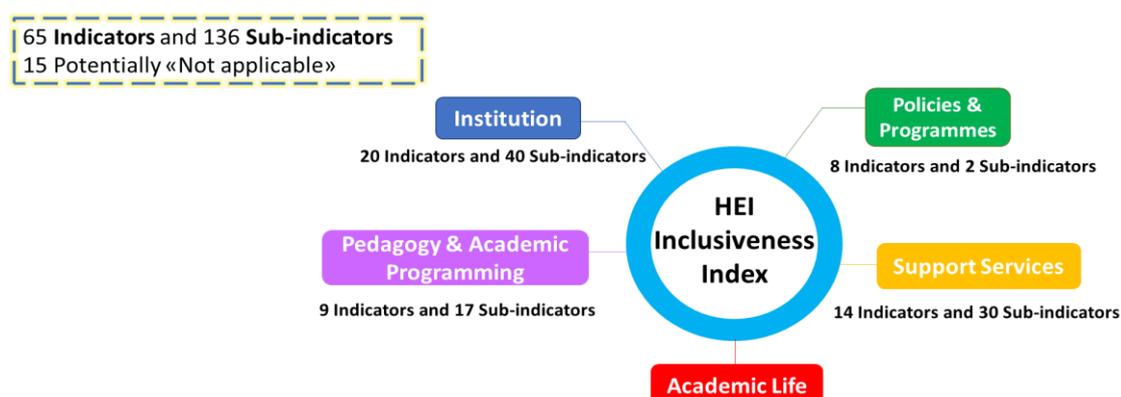

Figure 2 How the Matrix looks like.

Three of the five identified areas included a number of potential “not applicable” indicators, that is, a series of indicators that might apply in some HE contexts but not in others.

www.xeniaindex.eu

Index splitted by area	# Macro Indicators	Full Applicable Macro-Indicators	Mean Relevance (1-5)
Institution	20	19	4,61
Policies & Programs	8	8	4,63
Pedagogy	9	9	4,55
Support Services	14	8	4,47
Academic Life	14	6	4,58

Figure 3 Number of fully applicable indicators per each thematic area.

As an example, some HEIs provide living accommodations for students. In this case, the XENIA Inclusiveness Index also takes into account the degree of inclusiveness of this specific facility that HEIs offer. Otherwise, in the case of HEIs that do not provide students with living accommodations, users are allowed to mark the “not applicable” box such that this indicator is not considered in the index computation and does not have an impact on the final inclusiveness score.

Table 1 List of not-applicable indicators split by thematic area.

Area	#Indicators	Indicators
Institution	1	10. There are gender-neutral or inclusive changing rooms/showers across campus(es) or in communal spaces.
Support Services	6	44. There is gender-inclusive accommodation available. 45a. There is dedicated accommodation for LGBTQI+ students. 45. Students who identify as trans* or non-binary can decide if they want to be housed together or not, depending on their needs and desires. 46. Campus accommodation staff are trained on gender and sexual identities and diversity.

www.xeniaindex.eu

Area	#Indicators	Indicators
		<p>47. Campus accommodation staff are educated on inclusive language and communication in relation to gender and sexual orientation.</p> <p>48. Campus accommodation is affordable and subsidised where necessary.</p>
Academic Life	8	<p>51. There is a sports policy on equality, diversity and inclusion.</p> <p>52. There are gender-inclusive or gender-neutral bathrooms and facilities.</p> <p>53. There are team sport options available to trans* and non-binary students.</p> <p>54. There are single sport options available to trans* and non-binary students.</p> <p>55. There are sports tournaments available to trans* and non-binary students.</p> <p>56. There is a club/society policy on equality, diversity and inclusion.</p> <p>57. The club/society incorporates material on gender diversity.</p> <p>58. The club/society incorporates material on sexual orientation.</p>

www.xeniaindex.eu

Indicators' relevancy and quantification of the degree of partners' agreement

All the partners of the consortium rated the relevance of each identified macro-indicator using a scale ranging from 1 (very low relevancy) to 5 (very high relevancy). Sub-indicators were rated on a three-point scale (1-3), with high scores reflecting a higher relevance.

Overall, mean and median values were relatively high, indicating a high relevance for each macro-indicator and sub-indicator considered in the Matrix; the standard deviations were generally small, suggesting a low amount of variation around the mean (see the [sheet](#) annexed).

The percentage of exact agreement (Hintze & Matthews, 2004) among partners was generally adequate, with an exact agreement between raters of over 70% in three areas (Institution, Policies & Programmes, and Academic Life), whereas the exact consensus was 60% for Support Services and 53% for Pedagogy & Academic Programming.

Table 2 Percentages of exact agreement among raters on the relevance for each indicator of the XENIA matrix.

Thematic areas	Agreement Percentages
Institution	73%
Policies & Programmes	72%
Pedagogy & Academic Programming	53%
Support Services	60%
Academic Life	76%

www.xeniaindex.eu

The Intraclass correlation coefficients assessing partners' agreement across indicators and sub-indicators were excellent or good.

Table 3 Intraclass Correlation Coefficients.

Intraclass Correlation Coefficients (ICCs)			Interpretation
	Consistency ^a	Absolute Agreement ^b	
Overall score	.93	.93	Excellent
Institution	.95	.95	Excellent
Policy & Programmes	.88	.87	Good
Pedagogy & Academic Programming	.90	.89	Excellent/Good
Support Services	.92	.92	Excellent
Academic Life	.93	.91	Excellent

Notes. ^aConsistency refers to the degree to which one rater's score (y) can be equated to another rater's score (x) plus a systematic error (c) (ie, $y = x + c$). ^bAbsolute agreement concerns the degree to which one rater's score (y) equals another rater's score (x).

Based on the scores associated to each indicator in the Matrix, the mean relevance for each area is as follows:

Table 4 Average relevance for each XENIA thematic area.

Institution (#indicators = 20)	4,61 (SD = 0,53)
Policies & Programmes (#indicators = 8)	4,63 (SD = 0,32)
Pedagogy and Academic Programming (#indicators = 9)	4,55 (SD = 0,28)
Support Services (#indicators = 14)	4,47 (SD = 0,35)
Academic Life (#indicators = 14)	4,58 (SD = 0,23)

www.xeniaindex.eu

As can be observed in Table 4 and Figure 4, all thematic areas obtained a mean score of relevance above four. Overall, the categories Policies & Programmes and Institution got a tendentially higher average score of significance compared to the other categories, although these differences were very slight.

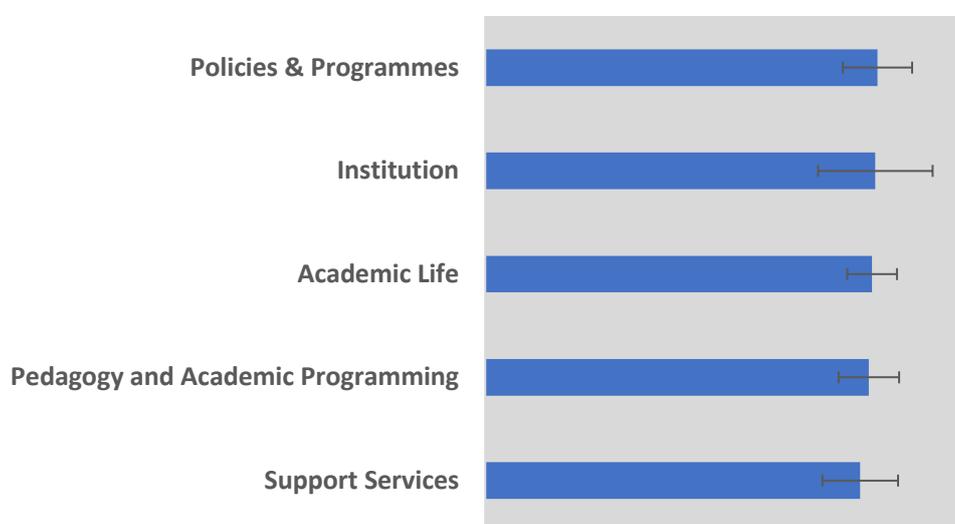

Figure 4 Hierarchy of relevance among the thematic areas based on their average scores.

Indicators' Accessibility

As regards the indicators' accessibility (how easy it is to access information for the HEI's specialised personnel), feedback from higher education institutions involved in the project has been summarised in the [sheet annexed](#). Accessibility was rated for each indicator using a 5-point scale ranging from 1 (very low accessibility) to 5 (very high accessibility).

As can be observed in the sheet annexed, some indicators resulted arising particular concerns as they were rated, on average, not very easily accessible (mean score below < 3.5):

www.xeniaindex.eu

Table 5 Indicators with low estimated accessibility.

Area	#Indicators	Indicators
Institution	4	<p>15. Students have the option on admission or enrolment forms to self-identify sexual orientation, if desired.</p> <p>16. Students have options that are not limited to male/female on admission or enrolment forms to self identify their gender or gender expression regardless of legal identification.</p> <p>17. The HEI has received merits, awards or official ratings for their LGBTQI+ friendliness, welcomeness, or markers of inclusive practices.</p> <p>18. The HEI has received merits, awards or official ratings for their gender equality promotion, efforts, implementation, or markers of inclusive practices.</p>
Support Services	1	<p>47. Campus accommodation staff are educated on inclusive language and communication in relation to gender and sexual orientation.</p>
Academic Life	5	<p>54. There are single sport options available to trans* and non-binary students.</p> <p>57. The club/society incorporates material on gender diversity.</p> <p>58. The club/society incorporates material on sexual orientation.</p> <p>59. There are regular social activities for LGBTQI+ students and staff.</p> <p>60. Safe spaces & events are provided to explore emerging sexualities and gender identities.</p>

www.xeniaindex.eu

Some adaptations have been implemented on the platform that hosts the Matrix in order to address this issue and then make the information retrieval easier for the HEI's specialised personal who will get the Matrix. More specifically, the HEI's specialised personnel will be allowed to register on the platform to access the Matrix so that:

- 1) More than one person might access the Matrix and complete it on the basis of the information they have;
- 2) It will be possible to complete the survey at multiple time points (this would allow the user(s) to retrieve the information and access it at a later moment to complete the Matrix).

Overall, specific attention will be devoted to these indicators during the pilot phase of the index development.

www.xeniaindex.eu

The XENIA Survey

A series of questions for students and staff of HEIs have been then developed to mirror the objective indicators resulted from WP1 and WP2, as above described.

More in detail, two questionnaires have been produced, one for students and one for staff, to gauge their perception about the level of inclusiveness of their HEI as well as the perception on whether their HEI is adequately equipped and prepared to be inclusive.

Gauging the subjective perceptions of people who study or work within the HE context will allow HEIs to identify gaps between what they do to promote inclusion and the impact that their strategies actually have on the final beneficiaries (students and staff). Given the importance of building a tool able to combine and keep together the objective information and the subjective one, special attention has been focused on the interlinkages and relations between questions of the survey and indicators of the Matrix.

Identification of the key questions

Several questions have been identified to reflect the macro-area and indicators developed in WP1 and fine-tuned in the first activity of WP2.

All the partners of the consortium have provided their feedback and suggestions for each question.

The survey has resulted as consisting of 27 macro-indicators, investigating i) if students and staff are aware of specific resources for EDI that are available at HEI level, ii) how students and staff evaluate the quality of the HEI's approach to EDI, iii) what is the personal experience of students and staff in relation to the Institution level of inclusiveness and support for diversity.

The number of questions for each area is as follows:

www.xeniaindex.eu

Table 6 Total number of the survey's indicators.

Institution	Policy & Programmes	Pedagogy & Academic programming	Support services	Academic Life
10	4	4	6	3

The survey's scoring has been created such that higher scores reflect higher positive perceptions of HEI's Inclusiveness.

The version of the survey that will be piloted and tested under WP3 is included in Section 4 of this document.

The XENIA Inclusiveness Index

XENIA Inclusiveness Index consists of a series of rendering tools that provide unified aggregate results as well as disaggregate scores per thematic area through algorithm calculations.

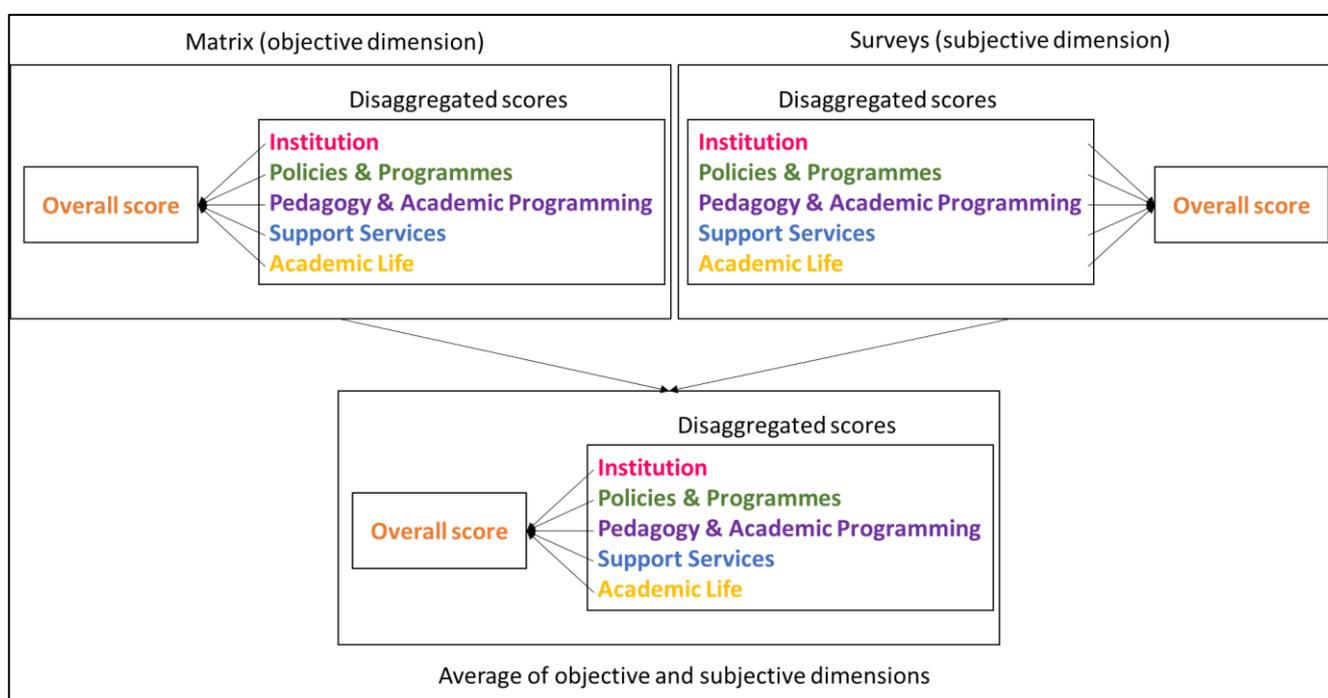

Figure 5 The structure of the XENIA Inclusiveness Index.

The scoring mechanism uses a scale from 0 to 100, where the higher the score the higher the inclusiveness level in the specific HEI.

The algorithm for computing the XENIA Inclusiveness Index has been developed by Internet Web Solutions (IWS), the ICT partner of the XENIA consortium. IWS has also developed the whole ICT structure of the Xenia Index, as it has been described in the current document, including the visual rendering of the scores (for further details, visit www.xeniaindex.eu).

www.xeniaindex.eu

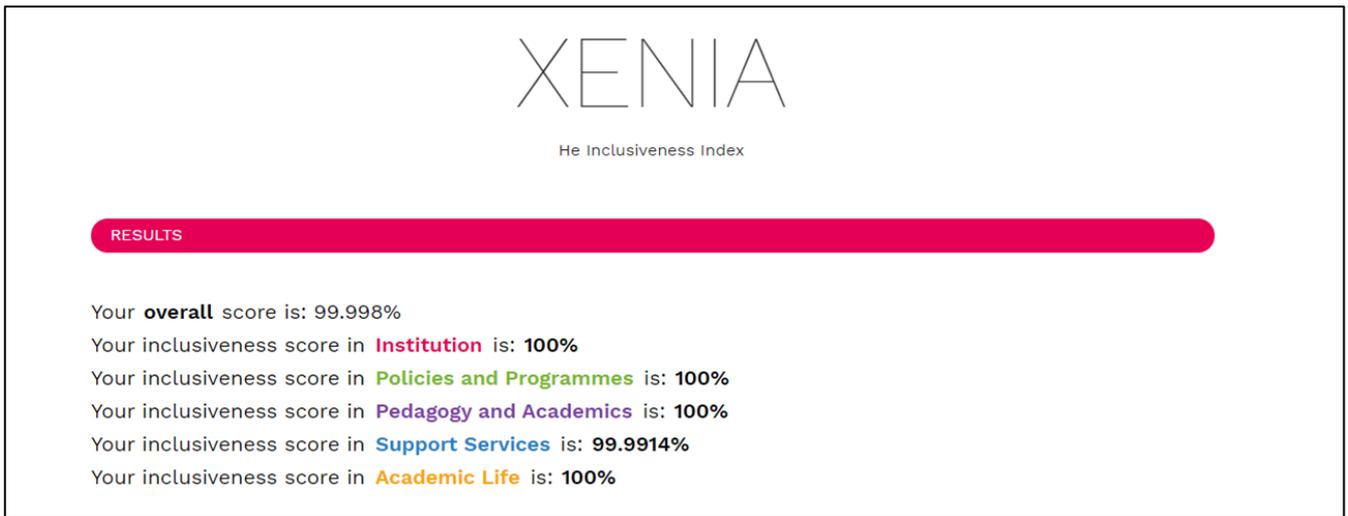

Figure 6 Visual rendering of the scores deriving from the algorithm implementation.

www.xeniaindex.eu

The Index for the Matrix

Some key concepts:

- For each indicator (both macro- and sub-indicator), a specific relevance value has been associated in a preliminary phase of the project (see paragraph “[Indicators’ relevance and quantification of the degree of partners’ agreement](#)”);
- Then, each macro-indicator has been assigned with a weight depending on its relevance value and the total number of the macro-indicators in the correspondent thematic area;
- Similarly, each sub-indicator has been assigned with a weight depending on its relevance value and the total number of sub-indicators referring to the same macro-indicator.
-

	Relevance [1-5]	Sub-Indicator Weight (0-1)	Macro-Indicator Weight (0-1)
2. The HEI has a Code of Conduct or similar in relation to bullying, harassment, misconduct and behaviour towards others	4,83		0,05
	Relevance [1-3]		
↳ There is a specific reference to gender identity.	2,83	0,1889	
↳ There is a specific reference to gender expression.		0,1889	
↳ There is a specific reference to sexual orientation.		0,1889	
↳ There is a specific reference to gender equality.		0,1889	
↳ This is available on the HEI’s website	2,67	0,1778	

Figure 7 Example of macro- and sub-Indicators with their relevancy scores and associated weights.

The algorithm that has been developed for the Matrix uses Boolean logic. Using a series of yes-or-no questions, it assigns 0 to “no” and 1 to “yes” answers.

For example:

“The HEI has a Code of Conduct or similar in relation to bullying, harassment, misconduct and behaviour towards others”.

Yes = 1 / No = 0

The contribution that each yes-or-no answer has on the index computation has been calculated according to the above-mentioned weights assigned to macro- and sub-indicators.

The Matrix has been arranged according to the main thematic areas identified in WP1 and WP2. HEIs who access the platform can then choose if they want to assess their inclusiveness levels in all areas

www.xeniaindex.eu

or only in some of them. Thus, the algorithm calculates the score of tested HEI in each different area and overall, suggesting best practices to reinforce or improve their situation in each assessed area and overall.

On the basis of the results of the piloting and testing phase of the project (WP3), it will be possible to fine-tune the algorithm accordingly.

The Index for the Survey

The survey consists of multiple-choice answers associated with the identified macro- and sub-indicators. The logic of the algorithm has been designed such that higher scores reflect higher positive perceptions of HEI's Inclusiveness.

For example:

Question: Does your Institution adopt anti-discrimination measures specific to gender and sexual orientation?

Yes = 1 | No = 0 | Don't know = 0.5

As for the Matrix, the algorithm computes the score of tested HEI in each different area and overall, suggesting at the end of the test, also in this case, best practices that could help to foster social inclusion within the HE context.

The aggregate XENIA Inclusiveness Index

If applicable, the results from the Matrix and from the surveys are finally aggregated into an aggregate index (it simply operates an average between the two scores) for having an overall view about the inclusiveness level of the HEI, calculated both from the objective and subjective dimensions.

www.xeniaindex.eu

Section 3 - The XENIA process

XENIA is a careful, step-by-step process that supports HEIs in identifying and implementing priorities to develop fully inclusive HE settings, which in turn may prompt staff and students to improve cultures as well.

This process involves a detailed self-review that draws on the experience of everyone connected to the Institution, regardless of one's academic profile. It is not about assessing the HEI's competence or mastery, nor about establishing hierarchies of HEIs on the basis of their inclusiveness scores. Instead, it is about finding ways to improve the well-being of entire academic communities through specific actions aiming at fostering social inclusion and creating more diverse and inclusive environments for both students and staff.

One of the greatest strengths of XENIA is that, while exploring and reviewing the Institution's policies, practices and initiatives, HEIs might notice inadequacies and grey areas of their EDI strategies that were previously unnoticed, as well as opportunities that they never considered before for effective inclusive development.

The indexing process might be described as consisting of five cyclical steps:

Figure 8 The XENIA process.

www.xeniaindex.eu

Phase 1: Getting started with XENIA Inclusiveness Index

The XENIA process begins from the HEI's engagement in the XENIA Inclusiveness Index project. In this phase, the HEI identifies the person or the group of people (namely, the specialised personnel) who might take charge of the XENIA process, learn more about the XENIA tools and explore how they can be used.

Phase 2: Finding out about the HEI's Inclusiveness level

Once the HEI's specialised personnel has become familiar with XENIA, they can start exploring and analysing the inclusiveness level of their Institution. This work consists of:

- reviewing the HEI's approach to EDI using the matrix indicators.

The indicators of the Matrix can be answered individually or by dividing the work with others in the group (where applicable) on the basis of their knowledge about the existing policies, practices and general strategies for EDI within the HEI. The result will consist of a series of inclusiveness scores, each one reflecting a specific XENIA thematic area, and a global score resulting from the average of the single scores;

- exploring the knowledge and the subjective perceptions of students and staff using the surveys' questions.

This investigation is optional and requires a more substantial effort by the HEI to promote the surveys among students and staff of the academic community in order to gain insight into their personal experiences in the HE environments. Data from students and staff will be collected anonymously and accessible to HEIs in an aggregate fashion. This information, as for the Matrix, will be summarised in a series of inclusiveness scores for each XENIA thematic area examined, as well as in a global score resulting from the average of the single scores.

HEIs that choose to adopt both the Matrix and the survey will also obtain the XENIA composite score, which will result from the aggregation of the objective and subjective information collected. This composite score is a crucial element of XENIA, as it would allow HEIs to evaluate the degree to which their approach to EDI effectively impact the experience of the entire academic community

www.xeniaindex.eu

and to promptly understand what the “missing pieces” or the “advantages” of their EDI processes and outcomes are.

Phase 3: Analysing evidence and deciding priorities

Based on the score(s) that the HEI obtains in each thematic dimension, XENIA automatically identifies the areas that seem of particular concern and that appear critical to EDI, thus suggesting a series of best practices that could help to enhance the inclusiveness level of the HEI.

The specialised personnel should examine and analyse in detail the priorities for change that result from the XENIA Inclusiveness Index, also considering how addressing these priorities might contribute to the inclusive development of the HEI.

Phase 4 Implementing priorities

In this phase, HEIs should try to translate the index framework into practice.

Phase 5: Reviewing the Index process

Once changes have been implemented to improve the inclusiveness of policies and practices at the HEI level, HEIs are allowed to review their overall progress modifying their answers to the indicators of the Matrix and, optionally, gaining insight into students and staff experiences in the HEI’s environments. This option would provide the HEI with a “reality check” on whether and how changes in the HEI’s policies, services, programmes, and initiatives have had or are having any impact on the perceived inclusion of all genders and sexual orientations within the HE context, in order to formulate new priorities for improving the HEI inclusiveness.

www.xeniaindex.eu

Section 4 - Instruments

The Matrix: List of indicators (macro- and sub-indicators)

Institution

The HEI has a non-discrimination policy.

↳ This covers gender.

↳ This covers gender expression.

↳ This covers sexual orientation.

↳ This covers gender equality.

The HEI has a Code of Conduct or similar in relation to bullying, harassment, misconduct and behaviour towards others.

↳ There is a specific reference to gender identity.

↳ There is a specific reference to gender expression.

↳ There is a specific reference to sexual orientation.

↳ There is a specific reference to gender equality.

↳ This is available on the HEI's website.

There is a helpdesk, service desk or institutional service for information, support and reporting of discrimination.

↳ This is advertised on campus(es) or in communal spaces.

↳ This is advertised on the HEI's website.

www.xeniaindex.eu

There is a dedicated procedure for reporting discrimination on the basis of gender and/or sexual orientation.

↳ How to report is advertised across campus(es) or in communal spaces.

↳ How to report is advertised on the HEI's website.

↳ Reporting can be done online.

↳ Reporting can be anonymous.

↳ A complaint can be made unofficially.

↳ An official complaint can be made.

↳ All complaints are recorded.

There are specific institutional committees, groups and/or persons responsible for institutional advice and oversight on equality, diversity and inclusion.

There are specific institutional committees, groups and/or persons responsible for implementing equality, diversity and inclusion policies.

There is one or more university recognised organisations, groups or societies that promote equality, diversity and inclusion specific to gender identity and/or expression and sexual orientation among staff.

There is one or more university recognised organisations, groups or societies that promote equality, diversity and inclusion specific to gender identity and/or expression and sexual orientation among students.

There are gender neutral bathrooms across campus(es) or in communal spaces.

↳ They are clearly signed as gender neutral/inclusive.

↳ Information about where and how many can be found on the HEI's website.

www.xeniaindex.eu

There are gender neutral or inclusive changing rooms/showers across campus(es) or in communal spaces.

↳ They are clearly signed as gender neutral/inclusive.
